

Royal Mail

Less energy. More delivery.

When the Royal Mail set new targets for minimising the impact of their work on the environment they turned to us.

We conducted energy reviews of their buildings. We designed a bespoke process and made recommendations that could be implemented either right away with little or no cost, or initiatives we called 'spend and save' which required some initial capital expenditure that would, over time, save energy and reduce costs.

Our engineers have already reduced energy consumption by a whopping 2.65 million kwh per year. With further recommendations that will save over 5.54 million kwh per year. Helping save while increasing performance.
