Balfour Beatty
WorkPlace

We work. **You excel.**

Balfour Beatty WorkPlace supports schools, commercial enterprises, industrial facilities, hospitals and government institutions, helping them define and realise their strategic facilities management objectives in a world that is evolving at unprecedented speed.

The Local Authority Division of Balfour Beatty WorkPlace leads the field in highways services and transportation solutions. Our goal is to maintain safe, reliable and efficient networks through effective collaboration with the public sector.

Delivering Infrastructure. Creating Networks.

We manage all aspects of the highways network, from feasibility through to planning, design and operational delivery. We ensure that accessibility, safety, congestion and sustainability are addressed throughout the network and assets life-cycle.

We work as a team with all our stakeholders, including the local authorities, police, utility and rail companies, to ensure full co-operation and minimal disruption. This means that when we undertake any service such as road improvement schemes, winter maintenance or ensuring access to a major event, we provide an effective transport system.

Our design services incorporate the necessary technical, legal, environmental and financial support, and ensure we deliver cost effective and sustainable solutions for our clients. We design, install and manage technology solutions across the UK's road networks including variable message signs, CCTV and safety cameras.

We also provide a single point of contact for your project and can manage the entire process including transport planning, structures, street-lighting, geotechnical, CDM and environmental disciplines.

We have significant experience of highway maintenance and management through long term effective operations of local authority networks. Our ongoing success is due to our understanding of our client's needs and ability to provide integrated services for our customers.

"Quality street lighting is high on the general public's agenda, and provides an essential tool to assist crime prevention and improve communities."

Bright Idea. New Innovation.

As one of the largest providers in the UK, our street lighting team is ideally placed to help local authorities improve their services providing better value and performance. With over 370,000 units under our management, we are a major player in the design and maintenance market. Investing, installing and maintaining new stock funded through Private Finance Initiatives constitutes a significant part of our business.

We work closely with our clients to minimise their carbon footprint by the use of modern lighting technologies, delivering significant savings in ongoing energy and maintenance costs. In all our designs, we consider the needs of local people, addressing issues such as light pollution.

Our integrated in-house design team helps clients to determine the optimum lighting level, whilst the style of columns and lanterns is seamlessly integrated into the street scene and conservation areas. We make recommendations for the control of lighting and reduction or elimination of obtrusive light.
